SUMMARY

Second-year Computer Science student from Bicol using AI-assisted development to build community-focused software: a 9,000-entry Bicol dictionary, scholarship navigator for provincial students, and award-winning nutrition subsidy prototype. Defines product requirements and feature logic, evaluates technology stacks and architecture choices with AI, uses AI to generate implementation code, tests behavior, troubleshoots issues, and deploys applications built with TypeScript, Next.js, and PostgreSQL.

EXPERIENCE

Backend AI Engineering Intern (Educational Program) - FlyRank AI

July 2026 - Present

Unpaid, remote, self-paced educational portfolio program

- Working through independent Backend AI Engineering assignments covering CRUD APIs, databases, containerization, authentication, web scraping, AI API integration, background jobs, and report generation; work is published through personal public GitHub repositories.

Media Partnership Lead - Seekers Guild

Aug 2026 - Present

- Own the guild's earned media across outlets, student publications, ecosystem newsletters, and podcasts, distinct from the Social Media seat, which runs the guild's own channels.
- Build a focused list of responsive media contacts and write outlet-specific pitches with the Publications team, prioritizing relationship quality over volume.
- Prepare leadership for interviews and panels and track published coverage to grow the guild's presence in public search.

Member - Junior Blockchain Education Consortium of the Philippines - PUP Manila

Oct 2025 - Aug 2026

Member - AWS Cloud Club PUP

Oct 2025 - Aug 2026

PROJECTS

BANTAYOG - Blockchain-Backed Subsidy System

July 2026

Next.js, Polygon Amoy Testnet, Gemini API

- Built a blockchain-backed nutrition subsidy prototype that uses QR Nutri-Passes to restrict redemptions to approved food purchases.
- Integrated Gemini-powered product recognition with settlement on the Polygon Amoy testnet; served as backend developer in a four-person team.

Bicol-Tagalog-English Dictionary

May 2026 - Present

Next.js, TypeScript, Supabase, PostgreSQL | bicol-app.vercel.app | github.com/Yahiro025/bicol-app

- Built and deployed a full-text search platform for 9,000+ dictionary entries using Next.js, TypeScript, Supabase, and PostgreSQL.
- Added PostgreSQL indexing for sub-second queries and designed the data model to support additional Philippine regional languages.

TANGLAW - AI Scholarship Navigator

May 2026 - Present

Next.js, TypeScript, Retrieval-Augmented Generation | tanglaw-project.vercel.app | github.com/Yahiro025/tanglaw

- Co-developed a retrieval-augmented chatbot in a three-person PUP team to answer scholarship questions from verified source records.
- Grounded responses in curated scholarship data rather than model recall, helping students navigate scattered eligibility information.

Booth - CWTS Gaming Platform

2026

React, Vite, Tailwind CSS, Zustand, HTML5 Canvas | github.com/Jimuelle07/Booth-cwts-web

- Co-developed a 100% client-side, two-player local multiplayer web platform in a four-person team: split-screen layout, shared-keyboard controls, and four canvas games (Parkour, Bowling, Duck Pond, and a sky-battle shooter).
- Architecture uses a game registry, so new games plug in through one component interface (canvas ID, player state, shared key input) without changes to core platform code.

C-LABS - C Programming Practice Platform

2025

Next.js, Monaco Editor, Piston API | reviewer-peach-three.vercel.app

- Built a web-based C practice platform with 60 challenges across 12 core topics and five difficulty tiers, from Novice to Expert, with progress tracking.
- Embedded the Monaco Editor (VS Code's editor engine) with C syntax highlighting, and integrated the Piston API to compile with GCC and return real terminal output.

OPEN SOURCE - 4 MERGED PULL REQUESTS

Prettier - Angular @boundary / @error Error-Boundary Formatting 52k stars Merged PR #20015 github.com/prettier/prettier/pull/20015 - Added parsing and printing for Angular 22.2 error-boundary blocks (@boundary / @error), reusing the pairing rules of existing control-flow blocks such as @if/@else and @defer. - Upgraded to angular-html-parser 10.12.0 and iterated with a Prettier maintainer through review: adopted Angular's official examples as test fixtures and deferred @error parameter formatting per maintainer direction.	Sep 2026
pnpm - POSIX cmd-shim Path Corruption Fix 37k stars Merged PR #14878 github.com/pnpm/pnpm/pull/14878 - Fixed POSIX bin shims corrupting Windows-style paths such as C:\node_modules\.bin\tsc: echo interpreted the backslash escapes, turning \n and \t into control characters. - Switched the Rust cmd-shim header to printf '%s\n', added regression tests, and made warm reinstalls detect and rewrite stale echo-based shims.	Sep 2026
Tabby - Taskbar/Dock Flash on Terminal Bell 75k stars Merged PR #11651 github.com/Eugeny/tabby/pull/11651 - Implemented taskbar flashing (Windows/Linux) and dock bounce (macOS) via Electron flashFrame when the terminal bell rings while the window is unfocused, stopping when focus returns. - Added an opt-in terminal.bellFlashFrame setting (off by default) under Settings > Terminal > Sound, combinable with the visual and audible bell and hidden on the web platform.	Sep 2026
Undici (Node.js) - Cache Interceptor Abort Fix 8k stars Merged PR #5819 github.com/nodejs/undici/pull/5819 - Fixed the cache interceptor reporting aborted=true on successful cache hits: the flag aliased stream.destroyed, which is set after any normal stream end. - Tracked cancellation with an explicit flag set only in abort(), and added regression tests for both the reported case and the real-abort path.	Sep 2026

EDUCATION

Polytechnic University of the Philippines - NCR Campus BS Computer Science, 2nd Year GPA: 1.32 (1.00 is highest)	2025 - Present
Bicol Regional Science High School High School Diploma, STEM	2023 - Apr 2025

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C
Web and Data: Next.js, React, Node.js, Vite, Tailwind CSS, PostgreSQL, Supabase, Prisma
AI: Gemini API integration, Retrieval-Augmented Generation
Tools and Deployment: Git, GitHub, Vercel, Railway, Render

AWARDS

1st Runner-Up, GDG on Campus PUP SparkFest Hackathon - BANTAYOG; 15 teams, 10 finalists (July 2026)
Top 20 Finalist, CrypTita Plays Builder Showcase at WOCEE - BANTAYOG (2026)
